DETAILED ACTION

1. This is in response to the communication filed 07/10/2009. Claims 1, 2, 4, 6-10, 14-16, 18, 20-31 and 33-35 are pending and have been considered.

Allowance

2. Claims 3, 5, 11-13, 17, 19 and 32 have been cancelled.
3. Claims 28 and 33-35 have been amended.
4. Claims 1, 2, 4, 6-10, 14-16, 18, 20-31 and 33-35 are allowed.

Examiner's Statement of Reasons for Allowance

The following is an examiner's statement of reasons for allowance

5. Moskowitz (US 2008/0046742) discloses a system for encoding digital watermark information in a signal. The system includes a window identifier for identifying a sample window in the signal; an interval calculator for determining a quantization interval of the sample window; and a sampler for normalizing the sample window to provide normalized samples. Further, the system includes a processor for identifying an area of the digital signal that will be affected by the digital filter and an encoder for encoding the at least one digital watermark in the digital signal. The encoder encodes the digital watermark to avoid the area of the digital signal that will be affected by the digital filter.

6. Venkatesan et al (US 6,829,710) discloses an apparatus for forming and embedding a highly tamper-resistant cryptographic identifier, i.e., a watermark, within non-marked executable code. Since the flow pattern of the watermark is highly intertwined with the flow pattern of the non-marked code, the watermark is effectively impossible to either remove from the code and/or

Art Unit: 2436

circumvent. The routines are added in such a manner that the flow pattern of resulting watermarked code is not substantially different from that of the non-marked code, thus frustrating third party detection of the watermark using standard flow analysis tools.

7. Bohnke (US 6,557,139) discloses an encoding apparatus, comprising means (21) for generating a checksum for incoming data; means (22) for constructing frames based on said incoming data and said generated checksum, and means (23) for multidimensionally coding said frames. Further, the present invention comprises a decoding apparatus for iterative decoding of multidimensionally decoded information, comprising means (28) for performing at least one decoding iteration on multidimensionally coded information, and means (32) for checking the decoded information after each decoding iteration and for causing said decoding iteration means (28) to perform a further decoding iteration on the basis of a checking result.

8. *The above prior art reference of record do not teach or render obvious the limitations as recited in independent claims 1, 20, 28 and 33-35 as amended. The combined references fail to teach "a system that facilitates efficient code construction, comprising: a component that receives a first code designed in a noise model, ...; and a transformation component that transforms the first code to a new code that has essentially same length parameters as the first code but is" hidden to a computationally bounded adversary wherein the new code acts" as a protective wrapping of the first code, such that an attack on the new code by the computationally bounded adversary would appear as a noise attack on the first code, this" allows the first code to utilize the algorithms to correct the noise errors,'...; and a tracing component that determines whether a user accessing the first code is" a valid user via a unique watermark associated with a particular user and embedded in the first code," and a pseudo random number generator, the*

Art Unit: 2436

pseudo random number generator generates two pseudo random numbers a and b, each n number of bits, based upon a position within the sequence of one of the messages, and further generates a random permutation \bar{b} that permutes the n bits. The cited references do not expressly or inherently disclose the aforementioned novel aspects of applicants' claimed subject matter as recited in the subject claims.

9. Dependent claims are allowed as they depend from an allowable independent claim.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
